Latest Renault Performance Motor Oil

Renault RN-17 is the latest 5W-30 service fill, mid SAPS specification for Renault's petrol and Euro 6 diesel engines. It allows independent workshops to compete with franchised car dealers, even for the newest Renault vehicles in the market.

The RN-17 specification is specifically developed for TDGI (Turbo Charged Direct Gasoline Injection) and latest diesel engines to increase the oil performance so that the oil drain intervals are not reduced. The need for a new Renault specification was driven by hardware changes on the engine designs as well as the emissions targets set by the government.

Comma's new Eco-R 5W-30 engine oil ensures you have a full coverage of Renault specific oils – from older makes to the very latest models.
